Brief about the Program (Activity/ Event)	Architectural education is undoubtedly a pedagogical process of „learning by doing“ experience. Teaching architectural design means different things to different people; each educator teaches according to his/her own set of ideologies and beliefs and in a manner that is distinct from others. But to achieve a better understanding of the subject and to avoid misconception of design language use in a studio; a learning tool is needed to help create a uniform design vocabulary and that one tool is nothing but "model making". Compared to other forms of representation model may have many unique advantages, but they also have limitations
